

In Initiative

Diabetes has grown to epidemic proportions in our seniors' population and for the first time, an encompassing solution will be available for retirement operators.

The 2014 award winning Diabetes Connect started as a pilot project in long term care to address the complex care needs of residents living with diabetes. The cornerstone of the program is the evidence based Diabetes Protocol, developed by OMNI Health Care, in collaboration with Dr. Andrew Steele and the Diabetes Advisory Team.

This program provides access to:

- The Diabetes Connect web portal
- Training materials developed specifically for frontline and care staff
- Reporting tools to establish baselines and measure and monitor change in outcomes
- Specialists, like Dr. Steele, to address clinical questions

Resource materials are currently being modified to better support residents, families and staff. What's more, on-site assistance (at no cost) is available to provide a more effective implementation process.

Innovation Marché Handbook

LTC Media

Welcome to the Innovation Marché!

"You can't solve a problem on the same level that it was created. You have to rise above it to the next level." - Albert Einstein

In keeping with this year's theme "Vision for Senior Living: 2025 and Beyond", we are thrilled to welcome you to the new **Innovation Marché**, an unparalleled venture into product and service innovation, showcasing the newest technology in the retirement sector.

Learn and Engage

In this booklet, you will find eight forward-thinking organizations who were chosen to showcase their products or services, which are poised to benefit the retirement sector through enhancing service models, improving efficiencies and cost savings, and improving residents' quality of life.

We strongly encourage you to visit each participant, either during the Tuesday evening reception or throughout Wednesday's education day. Watch live product demonstrations and engage in insightful conversation about how your home and operation can benefit from these innovative offerings.

Innovation Marché Passport

Enclosed in this booklet is an "Innovation Marché Passport". Visit participants and get your passport stamped for a chance to win an iPad mini! The winner will be announced end of day Wednesday.

LTC Media is a multimedia solutions company serving the Long Term Care and Retirement Communities.

Products and services include *infoTV* (digital signage using large format TV's), *infoTOUCH* (interactive information kiosks), *in-roomTV* (custom information TV channel) and *touchTABLE* (interactive leisure table).

This unique product introduces simple touch technology with a very intuitive interface allowing residents, staff and visitors to browse menus, activities and other facility information at any time. View feedback and response live on the web plus collect analytics using customized forms.

Eye-catching displays command attention and engages the user. Custom programs to suit any environment, so the user navigates for information that's useful to them. Internet accessibility enables administrative staff secure access from their desktop to dynamically update or schedule content months in advance.

HUR

HUR, a world-leading supplier of exercise equipment for active aging

Strength and balance training are key factors in health and well-being. HUR has for more than 25 years been dedicated to providing the best products and solutions for this, contributing to life long strength.

HUR has designed a unique series of exercise equipment that can benefit clients of all ages with a wide range of health conditions.

When it comes to seniors, muscular strength is directly connected to functional ability, balance control and managing everyday chores independently. HUR's fitness equipment and SmartCard System - programs the workout setting resistance levels and repetitions automatically and updates programs - was designed in cooperation with universities and leading medical experts.

This pneumatic air-resistance technology allows seniors to safely build their "Functional Fitness" by increasing and maintaining strength in muscles, increase static and dynamic endurance and increase bone density; also available is HUR's easy to use testing and training balance line of equipment.

Jones Healthcare

The **Pharmaself24** is a new and innovative kiosk technology developed to help pharmacies elevate the delivery of prescription medication. With unparalleled features including sophisticated robotics, unmatched product capacity and full pharmacy management system integration, Pharmaself24 is revolutionizing the traditional pharmacy service model.

Pharmaself24 provides extended pharmacy services within the retirement home, offering a convenient and flexible means of medication pick-up for both the pharmacy servicing the home and its residents. Pharmacies are often challenged to ensure timely and efficient delivery of medications, so the kiosk creates a centralized location for residents to retrieve prescriptions. The high-capacity kiosk can also stock in-demand products outside of prescription medication creating a convenient one-stop shop experience.

Other features include enhanced security to protect patient health and payment information, an easy-to-use and highly legible touch screen, the ability to scan and submit prescriptions, as well as direct access to the pharmacist via two-way video conferencing.

Triverity

Quality - Innovation - Education

One Minute INR!

Our Point-Of-Care INR initiative features the Coaguchek XS system (Roche Diagnostics) and affords residents on Oral Anticoagulation Therapy; a simple, more comfortable and convenient finger-stick alternative to having blood drawn from a vein.

This technology delivers fast, lab equivalent accuracy and reliable results.

Frequent INR testing leads to fewer life threatening events and improved quality of life. Point-Of-Care INR testing is a value infused service that can be added to the menu of services provided with ease and efficiency.

Modern Waste Products

BINPAK is a fully sealed waste compactor that offers benefits your facility cannot get using standard dumpsters or vertical compactors that sit over a dumpster.

Why consider a BINPAK for your retirement or care facility? Low load height for staff means ease of use and improved staff safety; no

odours/pests/birds/animals in your waste; easy compliance with Ministry requirements to keep waste sealed; fewer waste pickups equals lower cost; a cleaner property.

Additional benefits include the ability to locate the BINPAK indoors or outside, the ability to relocate the BINPAK easily if changes to the property are planned, and improved customer service when visitors tour the property. You do not have to change your hauler contracts – we work with your hauler.

BINPAK is a Canadian product, manufactured out of Modern Waste Products' facility in Woodstock, ON. BINPAK is already in use in care and retirement homes in Canada, including Pinehaven (Waterloo), Legion Village (Cobourg) and Cheam Village and Glenwood in B.C.
